Coroner's Office, Cuyahoga County, Ohio

Case No. 76629

VITAL STATISTICAL REPORT

Official Date and Time of Death 7/4/54
Place of Death 28924 WISTLAKE ROAD--BAY VILLAGE, O.

Body viewed at Coroner's Office

Name of Husband 

Address of Hospital or Morgue 

Sex M
Color W
Marital Status MARRIED
Age 32
Height 67
Weight 125
Complexion Med.
Eyes Hazel
Hair Brown

Mustache Beard

Occupation Housewife
Social Security No. --

Place of Employment Home

Date of Birth April 14, 1923

HAIR

Place of Birth Cleveland, Ohio

Father's Name Thomas S. Reese

Mother's Maiden Name Dorothy Blake

Date of Injury 7/4/54

Burial Place Knollwood Mausoleum

Time of Accident 

Location of Accident Home

Homicide by assault

Death certified by Dr. S. R. Gerber, M.D.

See cause of death below.

MEDICAL CERTIFICATION

1. DISEASE OR CONDITION DIRECTLY LEADING TO DEATH (indicate"

2. OTHER SIGNIFICANT CONDITIONS 

PROBABLE CAUSE OF DEATH

Primary Multiple impacts to head and face with comminuted fractures of skull and separation of frontal suture, bilateral subdural hemorrhages, diffuse bilateral subarachnoid hemorrhages, and contusions of brain.

Secondary Homicide by assault.

Cuyahoga County Coroner's Office

Case # 76629 T 1-12

Supp. issued 7/12/54, LP.

File's ex XXXX

Case # 76629 T 1-12

3 Photostatic copies of autopsy issued to W. J. Corrigan—Williamson Bldg. 1-20-1955

1 verdict, lab and protocol to Gary C. Hopper, 3516 Rockfalls Dr. Richmond, Va. 23225 9/28/87 cf
There is an area of crusted abrasion measuring 22 x 1 2 in the left frontal region, centered 2" from the midline. It extends from the supra-orbital margin cephalad. The injury extends down to the underlying bone.

There is a crusted crescent laceration measuring 1 x 3" in the left frontal region, centered 2" from the midline. The lowermost point of the laceration is located 1 2 above the supra-orbital ridge. The laceration extends downward to the level of the temporal bone.

There is a crescent gap laceration measuring 1 2 x 3 8 in the left frontal region, centered 1 2 from the midline. It extends from the supra-orbital ridge cephalad. The underlying bone is visible in the depths of the wound.

There is a linear laceration 2 x 3 in the midfrontal region. The injury originates at the glabella and extends cephalad. The laceration extends through the soft tissue to the underlying bone.

There is a ragged crescent laceration measuring 1 2 x 3 in the right frontal region centered 1 from the midline and 6 2 above the supra-orbital ridge. The laceration is located immediately above the left eye. The edge of the laceration is 3 3 in width. The laceration extends downward to the underlying bone.

There is a linear laceration measuring 1 x 3 8 in the right frontal region centered 2" from the midline and 1 3 above the supra-orbital ridge. The laceration runs from lateral and posterior medially and anteriorly. The laceration extends down to the underlying bone. Compressed fractures of the frontal bone are visible and palpable in the depths of the lacerations described above.

There is a gapping elliptical laceration measuring 1 x 3 in the right frontal region centered 2" above the supra-orbital ridge and 3" from the midline. The underlying bone is exposed.

There is a ragged crusted crescent laceration measuring 1 x 3 8 in the right parietal region, centered 1 4 from the midline and 1 2 from the right external auditory meatus. The laceration extends downward to the underlying bone. Fractures are visible and palpable in the depths of the laceration.

There is a ragged crescent laceration measuring 2 x 1 2 in the left parietal region centered 3" from the midline and 1 4 from the left external auditory meatus. The laceration extends downward to the underlying bone. Fractures are visible and palpable in the depths of the laceration.

There is a ragged crescent laceration measuring 1 2 x 1 3" in the left temporal region centered 3 from the left lateral canthus and 1 2 from the left external auditory meatus. The laceration extends downward to the underlying bone. Fractures are visible and palpable in the depths of the laceration.

There is a ragged crescent laceration measuring 2 2 x 1 2 in the left perietal region centered 3 from the midline and 1 4 from the left external auditory meatus. The injury extends from anterior and lateral posteriorly and medially. The anterior aspect of the injury is separated (23225 9/28/87) by a bridge of skin measuring 1 2 from the skin. The bridge of skin separates the preceding injury (23225 9/28/87) from the underlying bone.

There is a ragged crusted crescent laceration in the left parietal region centered 3 from the midline and 6 2 from the left external auditory meatus. The laceration measures 8 x 1 2 and is separated from the preceding injury (23225 9/28/87) by a bridge of skin measuring up to 3 2 in width. The underlying bone is exposed.

There is a laceration measuring 3/16 x 1/2" in the right pre-surgical region over the temporo-mandibular joint. It is centered 1 4" from the right external auditory meatus. The right upper and lower eyelids are swollen and discolored a dark purplish brown.

There is an area of crusted abrasion in the mid-right upper lid measuring 1 2 x 3 in the right upper eyelid. The area of crusted abrasion measuring 1 2 x 3 in the right upper lid.

There is swelling and purple-brown discoloration of the left upper and lower eyelids. The discoloration and swelling are less marked than on the right.

There is a fracture of the nasal bone with crepitus on manipulation.

There is a complete fracture of the upper right medial incisor at the junction of the proximal and middle third of the tooth. The fracture is present and the fractured surface is sharp. The distal fragment of the tooth is not present within the mouth.

There is a chip defect on the occlusal-frontal surface of the upper left medial incisor. The defect measures 3/16 x 1/8", and the edges are sharp.

There is an area of purple-brown discoloration measuring 2 in diameter over the superior aspect of the right shoulder. The discoloration is present.

There is a contused abrasion measuring 1 2 x 3 2 over the right radius centered 7 2 proximal to the tip of the right thumb.

There is an area of crusted abrasion measuring 2 x 3 2 on the lateral aspect of the dorsum of the right wrist.

There is a dried abrasion measuring 3/16 x 3/8" over the base of the right thumb on the palm aspect.

There is a contused abrasion measuring 1 2 x 3 2 over the dorsum of the proximal phalanx of the right index finger immediately distal to the metacarpophalangeal joint.

There is an area of abrasion measuring 1 2 x 1/8 over the metacarpophalangeal joint on the dorsum of the right 4th finger.

There is hyper-mobility and crepitus on the right 5th finger at the metacarpophalangeal joint.

There is a contused abrasion measuring 1 2 x 3 2 over the left ulna centered 10 proximal to the tip of the left middle finger.

There is a partial evulsion of the fingernail of the left 5th finger with the root of the nail exposed.
